

# Accessibility Audit Services

## Blind Institute of Technology (BIT)

### What is an Accessibility Audit?

An accessibility audit is an evaluation of how accessible your organization's digital products and services are. Most often, this refers to a website or mobile app used by customers, but a more thorough audit would also include internal-facing intranets.

### Why BIT?

We are very mission-driven in our unique position as a nonprofit employing people with disabilities. We know that a more accessible world is a more equal world for employment. All of our accessibility user testers are experts and professionals with disabilities. We offer educational and strategic hiring services to help transform your organization's culture of accessibility.

### How do we do it?

BIT's team of accessibility experts apply a proven methodology to help your organization understand the state of your digital accessibility. We assess digital content against the industry-leading Web Content Accessibility Guidelines (WCAG) 2.1 at the AA level, and 2.0 for certain automated tests. Our results come in an easy-to-understand spreadsheet, featuring high-level summaries and line by line breakdowns of our testing results. We also include a post-delivery discussion with our lead testers to help answer any questions.

### What Organizations Are Saying

"BIT's unique and fresh approach provides an excellent orientation to the challenges and practical aspects of accessibility. The empathy exercises, discussions and practice with different accessibility tools were remarkably valuable. I recommend all organizations work with BIT to implement accessibility into their own development teams."
